*Acrodermatitis atrophicans chronica (Russian text) MED.
PREGL. 1956, 9/3 (152-155)

After having described the symptomatology of this disease, the new aetiological acquisitions contributed by Götz and the completion of the clinical picture by Hauser, the author presents 3 cases of his own. In his opinion the disease is not so rare in this country, but it is not sufficiently recognized by the practitioners. Having no particular subjective troubles, the patients come to the specialists only rarely. The author has discovered 2 such cases in the course of a sanitary inspection in villages. The symptoms are quite characteristic. All 3 patients were villagers, 2 women and one man. The history revealed no insect punctures. The 3rd case is instructive. In this case the puncture by a leech preceded the illness. It is a matter of discussion whether the leeches have any significance in the aetiology of this rare disease and in the discovery of the still unknown infective agent. It is very important to begin therapy as soon as possible, namely before definite atrophy of the skin has developed. Therapy with penicillin was successful.

Abstract [English summary modified]: Tabulated data from 25 factories or
enterprises by 14 categories of dermato-venereologic diseases, by
infective versus allergic, by duration of disability, work-connectedness.
Incidence is 50% lower in 1961 than in 1960 but this difference is
probably an artefact. Three tables, 10 Yugoslav references (including
2 published in the German "Berufsdermatosen".)

TABLE OF CONTENTS

Introduction	Page 3
Development of oil fields	4
Water supply for flooding oil-bearing formations	8
Flooding the oil-bearing formation by pumping water or by allowing it to pass from one horizon to another in the well	11
Equipment for pumping water into the formation	15
Equipment for separate pumping of water into two formations through one well	18
Mastery of injection wells	20
Open-cut production of oil fields	20

Card 3/8

Call Nr: AF 1154274

New Developments in the Technology and Technique (Cont.)

Development of new methods for increasing the yield of oil from the formation	22
Problems in hydrodynamic study of formation and wells	23
Development of new control-measuring instruments and apparatus for oil production	24
Apparatus for studying the properties of oil under formation conditions	25
Down-hole instruments for measuring pressures	26
Instruments for measuring the liquid level in the well	28
Instruments for controlling oil production processes	30
Deep well instruments for determining the inflow and absorptivity of individual seams	34
Use of radioactive isotopes in oil production	35

Card 4/8

Call Nr: AF 1154274

New Developments in the Technology and Technique (Cont.)

Determination of the top of the cement back of the casing and qualitative evaluation of the thickness of the cement ring around the casing in well plugging by using radioactive isotopes	36
Use of radioactive isotopes in testing the technical conditions of wells	39
Use of radioactive isotopes in testing the permeability of strata	41
Use of marked atoms in controlling the movement of the front of gas and water pumped into the formation	41
Application of radioactive isotopes in controlling hydraulic fracturing	42
Hydraulic fracturing problems which can be solved with the aid of radioactive isotopes	44

Faniyev, Ruben Davydovich

Ekspluatatsiya neftyanykh i gasovykh mestorozhdeniy (Operation of Petroleum and Gas Fields) Moscow, Gostoptekhizdat, 1958. 499 p. 5,000 copies printed.

Exec. Ed.: N.D. Dubrovina; Tech. Ed.: E.A. Mukhina

PURPOSE: This book is intended for students at petroleum tekhnikums and may be used as a handbook by petroleum and gas field engineering and technical personnel.

COVERAGE: The author surveys the physical properties of rocks containing petroleum and gas, the fluids and gases they contain, and the physical bases of petroleum and gas recovery. Considerable attention is given to the exploration of petroleum and gas deposits, the surveying of wells and formations, the hydraulic fracturing of formations, and other methods that increase the flow to the bottom-hole zone of wells. Secondary methods of petroleum recovery are reviewed, and the technology of working petroleum and gas wells and their underground repair are treated in great detail. The author expresses his appreciation to A.S. Virnovskiy, G.K. Maksimovich, and A.A. Briskman for reviewing the manuscript. There are 14 Soviet references.

TITLE: On the complicated structure of geomagnetic variations on quiet days 12,44,55

SOURCE: Akademie der Wissenschaften. Berlin. Monatsberichte, v. 7, no. 7, 1965, 548-552

TOPIC TAGS: geomagnetic ~~variation~~, ~~quiet day~~, ~~main magnetic field~~, geomagnetic ~~declination~~, ~~yearly trend~~, ionosphere, ~~magnetic index~~, solar radiation, ~~geomagnetic disturbance~~, ~~geomagnetism~~

ABSTRACT: Variations of the geomagnetic field, even on quiet days, indicate that it has a fine structure. If the secular variation of the main magnetic field and the influence of the extraterrestrial magnetic field are eliminated, an irregularity in variations takes place even on extremely quiet days. Observation data of geomagnetic declination on 641 quiet days during the years 1950-1962 have been processed. Diurnal variations showed a distinct yearly trend which depended upon the position of the sun and the activity of the ionosphere, the nature of which corresponded to the Gaussian statistical distribution. Observational data were divided into two groups which covered two different periods of solar activity and magnetic indices. The first group included days with magnetic indices from 0 to 4 and the second group with indices from 5 to 9. The discrepancy of the results from the general trend of

Card 1/2

L 9868-66

ACC NR: AP6002022

of all 641 days in both groups is given in a table in the original article. The discrepancy of the first group is lower than that of the second group. The change in the daily rate is identical in both groups. Irregularities of ordinary Sq days are mainly caused by corpuscles. The yearly trend is more dependent upon the solar radiation than upon the corpuscular stream because the sunspot activity is closely associated with the solar radiation. Orig. art. has: 1 table and 2 figures. [EG]

MD ✓ The effect of iodized casein on the metabolism of protein, calcium, and phosphorus in milk cows. R. N. Odynets, K. I. Kanygina, V. G. Yakovlev, I. A. Fantalis, D. N. Kornsev, P. I. Mel'nikov, and I. I. Fedotov. *Trudy Inst. Zool. i Parasitol. Kirgiz. Filiala Akad. Nauk S.S.S.R.* 1954, No. 2, 8-20; *Referat. Zhur. Khim., Biol. Khim.*, 1955, No. 17874. — Iodized casein (9 g.) was added to the ration of milk

cows consisting of 14.1 kg. of fodder units and 15.2 g. of digested protein. The addn. of the iodized casein augments the physiol. deposition of the digested ration components. The digestibility of the proteins rose from 60.7 to 64.6%. The deposition of N in the organism rose from 14.99 to 40.04 g./head/day. The depletion of Ca and P from the organism's reserve stopped and the metabolic balance in regard to these substances became pos. With this, the general character of the exchange of Ca with proteins was altered. — The amt. of NH₄ N in the products of protein decompn. rose from 5.9 to 7.8%, from urea N 53.7 to 68.1%, and creatinine N 3.5 to 5.4%. The loss of Ca with feces was lessened from 83 to 75.7% and its content in the milk rose from 14.1 to 21.3%. It was concluded that iodized casein stimulated heart activity and respiration and lowered milk secretion from 11.6 to 10.4 kg./day. B. S. Levine

Orig Pub : Tr. In-ta zool. i parazitol. AN KirgSSR, 1956, vyp. 5, 3-8

Abstract : Two groups of cows (3 cows in each group) of Alatauian breed were put on a silage-hay concentrates diet. They were 4-10 years old, their weights were between 540 and 670 kg, and their milk yields amounted to 18.0-23.8 kg. The diet of one of the groups was more nourishing and had a lower P content. In the animals of the 1st group, daily Ca deposits amounted to about 3.68 gr, and in those of the

 TITLE : Protein Metabolism in the Blood of Non-Lactating Cows.
 ORIG. PUB. : Tr. In-ta zool. i parazitol. AN SSSR, 1958, vyp. 5, 19-23.
 SUMMARY : Before they were fed in the morning, blood was taken from 10 Alatauuskaya breed 3-4 years old cows: abdominal aorta, subcutaneous abdominal vein and jugular vein, and its dry residue, general and residual nitrogen, amino-nitrogen, albumins, globulins, urea, and ammonia were determined. Significant differences in the content of these indicators in blood which flows from organs situated in the region of the head or of the udder were not discovered.

TITLE: Wrinkle Flaws in the Glazing of Ceramic Sewer Pipes
(Sborka glazuri na keramicheskikh kanalizatsionnykh trubakh)

PERIODICAL: Steklo i keramika, 1958, Nr 9, pp 39 - 40 (USSR)

ABSTRACT: In the Plant "Kisloteupor", Shchekino, ceramic sewer pipes are glazed after drying in a machine of special design (I.V.Fayn, Ref 1) or by means of a special holder (zakhvat)(S.M.Melamed, Ref 2). Two months before wrinkles in the glazing occurred the drying plant was converted from gas to fuel oil, which contains about 3% of sulfur. A number of measures was adopted in order to remove the wrinkles in the glazing. Among other things, dextrine was added to the glazing, as was suggested by L.M.Blyumen (Ref 3) in his paper. No success was however achieved in removing the flaws. Various observations lead to the assumption that the cause for such wrinkles must be sought in the interaction of one component

of the glazing with an adsorption substance of the pipes. Further experiments showed that the wrinkles in the glazing are produced by the interaction of chalk with sulfur gas which is generated in the combustion of sulfur-containing fuel oil. By the sustained use of such oil the concentration of sulfur gas in the drying plant was increased, because this gas is easily absorbed by soot. The wrinkles in the glazing were removed by replacing chalk by plaster $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$. There are 3 references, 3 of which are Soviet.
